

SEE, INC. CEO Matt Murphy advocates a three-pronged approach to work safety.

Safety Environmental Engineering, Inc.

SAVING TIME, MONEY & LIVES

Safety Environmental Engineering, Inc. (SEE Inc.) empowers construction companies lacking access to large corporate safety departments with individualized real-world solutions necessary to protect and educate their workers, create safer work sites, and decrease job-site injuries. “We work with each company individually, evaluate their unique safety needs and requirements, and devise a plan to achieve and maintain each company’s safety standards,” says President/CEO Matt Murphy, a graduate of Leadership Washington County Class XXI.

The company’s in-depth, three-prong approach to creating safe work environments focuses on safety, education and ergonomics. “Our staff is comprised of knowledgeable experts covering all aspects of the construction field,” Murphy says. Safety Environmental Engineering also offers extensive training and certification programs encompassing areas ranging from manufacturing and warehousing to commercial and residential construction. “Our certified instructors have trained thousands of contractors and employees. They know your business and which safety issues are important to you. We offer training choices for all companies. We also teach

specialty and advanced topics that are specifically requested by individual companies for their employees.”

SEE Inc. also helps workers become more effective and efficient and less prone to injury through its extensive ergonomics analysis program. Ergonomics specialists make recommendations and design programs that allow employees to work smarter, be more productive, and remain aware of safety while in the work environment. Ergonomic reviews are handled through a Maryland therapist from Body Sense PT. The SEE Inc. experts actively assist clients requiring equipment solutions to solve ergonomics issues.

“Our goal at SEE, Inc. is to make sure your workers are safe,” Murphy concludes. “We help businesses take care of their everyday safety needs. A safe working environment is a valuable investment that no company should be without.” ★
